Imagine a world where all gas pumps look like this. What would the environment look like? What sounds would you hear?

**KEY WORDS:**

**Relic** is an object surviving from an earlier time, especially one of historical or sentimental interest.

**Black Lava** is formed when a volcano erupts. Lava is the molten rock that seeps out of vents created by volcanic activity. It covers flat surfaces of the earth, and eventually cools to form into a rock, known as Black Lava.

**Fossilization** is the process by which a plant or an animal becomes a fossil. Fossils give scientists clues about the past.

**Petrification** is the process by which organic matter is exposed to minerals over a long period of time and turns into a stony substance.
Imagine what the world will look like in 400 years. Select an object that you are wearing (shoes, watch, clothing, jewelry) and draw a futuristic version of it below:

Don’t forget to give your artwork a title!
